

Not only as a satisfied customer of satellite radio, but as a citezen of this United States of America, I respectfully point out to you and any agency of our elected government that it is our right to receive radio/satellite signals. As a consumer, I benefit greatly by listening to many of the satellite channels not found on standard AM/FM radio. In a consumer driven marketplace of supply and demand, it is a choice to subscribe to a satellite service in exchange for a fee. It is the objective of any company such as XM to offer it's customers the most for their money and of the best quality. The Weather channel and the Traffic channels are of utmost importance to me and many consumers who travel, drive, and plan ahead! Please do not obstruct the constitutional right of free speech. Do not allow NAB to insult the majority of citizens who do not want our constitutional rights "bought off" by lobbyists.

Respectfully,

N. Raphael
